

StockSync Demo Video Script

[Intro Slide: Logo + Tagline] 🗣️ □ *"Hi, I'm Pratik Kumar Singh a member of Inventory Management Team-3, and I'm excited to present our project — **StockSync**, a smart inventory management system built with the MERN stack. It simplifies stock control, order tracking, and supplier coordination for modern businesses."*

[Slide: Tech Stack] 🗣️ □ *"StockSync uses MongoDB, Express.js, React, and Node.js — along with Tailwind CSS for a clean and responsive UI."*

(Show icons or quick screen flashes of your frontend/backend folders.)

[Screen Recording: Login Flow – Admin & User] 🗣️ □ *"The system features secure login and role-based access. Admins have full control over the dashboard, inventory, and suppliers, while users can browse products and place orders."*

[Screen Recording: Admin Dashboard] 🗣️ □ *"Here's the Admin Dashboard — a snapshot of total sales, profit, revenue, and low-stock alerts with easy-to-read charts."*

[Inventory Section] 🗣️ □ *"The Inventory page gives the Admin a comprehensive overview of all products — showing quantity in hand, product cost, expiry dates, and low-stock alerts. Admins cannot edit here directly but can monitor which items need restocking."*

[Reports Page] 🗣️ □ *"Reports give a clear overview of revenue, profits, and top-selling items — helping admins make informed decisions."*

[Supplier Management – Add/View Supplier Info] 🗣️ □ *"If the supplier doesn't exist, Admins can quickly add a new one under the Suppliers section and link that supplier to the order. This ensures smooth procurement tracking."*

[Orders Panel – Admin View] 🗣️ □ *"When a product reaches low stock or a new item needs to be added, the Admin places an order from the Order page. The order form captures product details, quantity, order id, and expected delivery date."*

[Screen Recording: User View – Shop → Cart → Checkout] 🗣️ □ *"From the user's end, they can explore products by category, add items to cart, and securely place an order. This order is instantly visible to the admin for processing."*

[Slide: Upcoming Features] 🗣️ □ *"Future updates will include predictive inventory with ML, QR scanning, and a mobile-friendly version of the app."*

[Outro Slide: GitHub + Contact Info] 🗣️ □ *"Thanks for watching! You can explore the full code on GitHub, and feel free to connect with me on LinkedIn."*
