

1. Project Title

Answer: StockSync – Inventory Management System

2. Project Description / Summary

Answer:

StockSync is a full-stack inventory management solution developed using the MERN stack (MongoDB, Express.js, React, Node.js). It enables real-time inventory tracking, supplier management, order placement, and sales analytics. Built during the Infosys Springboard Internship, the system features role-based authentication, dynamic dashboards, low-stock alerts, and a user-friendly interface tailored for businesses of all sizes.

3. What was your role in this project?

Answer:

I was the primary developer and designer of the project. I worked on both the frontend (React + Tailwind CSS) and backend (Node.js + Express + MongoDB), implemented authentication with JWT, integrated REST APIs, and designed the UI/UX for all key modules including inventory, orders, suppliers, reports, and dashboard.

4. Key Features Implemented

- Role-based login (Admin & User)
 - Real-time inventory display
 - Order placement for low-stock items
 - Supplier management
 - Sales analytics with charts
 - Shop, Cart, and Checkout pages for users
 - Forgot/Reset Password with email notification
-

5. Challenges Faced

Answer:

- Implementing real-time low-stock alerts with dynamic UI updates
 - Ensuring secure role-based access control across routes
 - Designing a clean and responsive UI for both desktop and mobile
 - Managing multiple API endpoints and maintaining proper backend structure
 - Handling image uploads and email notifications using environment variables
-

6. Skills/Technologies Learned

- React Hooks & Routing
 - Tailwind CSS for modern UI
 - Node.js + Express.js backend structure
 - MongoDB schema design and queries
 - JWT Authentication
 - REST API creation & integration
 - Email integration using Nodemailer
 - Deployment & environment management
-

7. How was your experience overall?

Answer:

It was a great learning experience. I got to apply full-stack development concepts, solve real-world problems, and build a complete working solution from scratch. This project improved my confidence in backend logic, API integration, and building scalable UI. The support and structure from Infosys Springboard helped guide the development in the right direction.

8. Do you have any suggestions or improvements?

Answer:

Adding GitHub integration, version control best practices, and collaborative tools like Trello or Jira for team coordination could make future internships even more industry-ready. A demo review/feedback session with mentors would also be helpful.

If you send me the **exact survey questions**, I can tailor the answers 100% to fit.

Or if the form is a link or a screenshot, feel free to share that too and I'll take care of the rest!

Experience : Stay consistent, keep learning, and don't be afraid to explore new tools and technologies. A great learning platform for all college students that provides a great learning platform in a diversity of domains. My Experience—This internship was a great learning opportunity for me, which helped me to evaluate my technical skills. I got hands-on experience building a full-stack project using MERN with my wonderful teammates from different states. It also helped me to improve my soft skills, and I also gained confidence through live demonstrations.
